

# HYBRID

## Unique Structural Design

- Utilizes lower cost soft-nose construction where customization is not required
- High-density panels only used where required
- High-density floors provide the greatest structural support for performance and integrity over the life of the walk-in unit

## Greater SPAN, Greater HEIGHT

- Hard-nose rails span up to 25' unsupported
- Soft-nose unsupported span is 40% less

**Soft-Nose Span 40% LESS**

**Hard-Nose Span**

**UP TO 25'**

Regardless of the type of construction (high-density, soft-nose or hybrid), all are foamed-in-place urethane insulation, with R-8 per inch.

Integrity. Service. Excellence.
